DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 2, 9 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Wind et al (US 6,836,115)

As regards to claims 1 and 9, Wind et al teach a system and method for conducting magnetic resonance tomography, including a static magnetic field (first magnetic field), a radio magnetic field, and a second sinusoidal magnetic field (like a magnetic field produced by a ferromagnetic sphere; column 6, lines 12-43, figure 12). Wind et al further teach a non-crystalline sample under an influence of the first magnetic field to simultaneously obtain two or more magnetically resonant spins of the sample by sequentially angularly rotating the sample around a prescribed axis (figures 1-12)

Wind et al further teach limitations of claims 2 and 10 (figure 1, numeral 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Application/Control Number: 10/849,764

Art Unit: 2859

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 4, 6, 12, 14, are rejected under 35 U.S.C. 103(a) as being unpatentable over Wind et al (US 6,653,832), as applied to claim 1 and 9 above, and further in view of Harman (US 5,406,479).

As regards to claims 4, 6, 12 and 14 Wind does not specifically teach Fourier transform filtered backprojection algorithm for spin parallel use of projections. Harman teaches Fourier transform filtered backprojection algorithm for spin parallel use of projections. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Harman's teaching to analyze Wind et al's data to expedite data analysis improving expediency.

Allowable Subject Matter

- 3 Claims 3, 5,7, 8, 11, 13, 15 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 4. Applicant is urged to take into consideration the following relevant art, which could also be used to reject the present invention:

US 6,897,654; US 6,653,832; US 6,670,811; US 5,619,139

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brij B. Shrivastav whose telephone number is 571-272-2250. The examiner can normally be reached on 7 AM to 4 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego F. F. Gutierrez can be reached on 571-272-2245. The fax phone
